SUPPORTING DATA FOR ANALYTICAL REPORT – CONFIRMATION - 1605090

On August 26, 2016 BSCG provided an Analytical Report to Jamie P. Woodard indicating the results of confirmation testing for one item, identified as Dianabol - Lot# 152200608. The item was given an internal sample identification code of ADR 1605090-01. Testing was performed by liquid chromatography/mass spectrometry (LC/MS) using an API 4000 instrument. The presence of Androstenedione, DHEA, and DHT were confirmed in the item at the quantities indicated below.

Androstenedione: 9,000 ng/g +/- 1,000 ng/g (9.0 µg/g +/- 1.0 µg/g)
DHEA: ~2,492,103 ng/g (~2,492.10 µg/g)
DHT: ~106,803 ng/g (~106.80 µg/g)

Supporting data is provided on the following pages. The chain of custody form that arrived with the sample is at the beginning followed by a set of data for each compound confirmed. For each compound confirmed a combined standard of androstenedione, DHEA, and DHT at 2ng/ul was analyzed as well as control negatives and blanks. Control positives spiked with the compound of interest at the levels indicated were also analyzed in order to provide quantity estimates. For androstenedione confirmation, two sample replicates were run along with five control positives to give a multi-point estimate of quantity. For DHEA and DHT confirmations, one sample replicate was run along with one control positive to give a single point estimate of quantity.
